Education

University of Mumbai **Graduation: 2024**
Bachelor of Science in Information Technology
Coursework: Data Structures, Algorithms, Computer Systems, Software Engineering, Database Systems,AI

Skills

Languages: TypeScript, Python, JavaScript, SQL
AI & LLM: Azure OpenAI, RAG, LLM Agents, LangGraph, LangChain, Vector Search, Prompt Engineering, Document Intelligence, OCR
Backend: NestJS, Node.js, Prisma, PostgreSQL, Redis, BullMQ, REST APIs, Microservices
Cloud & Infrastructure: Azure, Docker, Kubernetes, Linux, Nginx, GitHub Actions, CI/CD
Architecture: Distributed Systems, Event-Driven Architecture, Queue-Based Systems, Clean Architecture, System Design, Production AI Infrastructure

Work Experience

Phablo AI **Founding Engineer / AI Full Stack Software Engineer** **JUN 2025 - PRESENT**

- Founding Engineer driving the architecture and technical direction of Phablo's AI-powered compliance platform for regulated industries, building production-ready systems that process large-scale enterprise documentation with AI.
- Architect and develop scalable backend services using **NestJS, TypeScript, Prisma, PostgreSQL, Redis, and BullMQ**, with a strong focus on distributed systems, reliability, and high-throughput processing.
- Design AI-native document intelligence pipelines supporting **RAG, LLM agents, LangGraph orchestration**, and **multi-stage compliance workflows** for complex regulatory assessments.
- Build resilient asynchronous processing architectures with queue-based microservices, distributed workers, retry strategies, resumable processing, and fault-tolerant execution.
- Lead production AI infrastructure on **Azure**, including Azure OpenAI integration, distributed rate limiting, GPU-powered document extraction services, autoscaling strategies, and performance optimization for enterprise workloads.
- Engineer high-performance document processing pipelines capable of handling **hundreds of large documents** using OCR, document parsing, semantic retrieval, and **AI-powered compliance analysis**.
- Apply **Clean Architecture**, domain-driven design principles, and functional programming patterns to create highly maintainable, testable, and extensible systems.
- Collaborate across the full stack using **React, Next.js, and Tailwind CSS** to deliver responsive, user-focused enterprise applications.
- Establish engineering best practices through **Docker**-based deployments, **CI/CD automation**, observability, production monitoring, and infrastructure optimization.
- Drive architectural decisions, code quality, and technical standards through design reviews, mentoring, and cross-functional collaboration.
- Owning features end-to-end—from system design and API contracts to production deployment—ensuring rapid iteration without sacrificing robustness.
- Own the complete software lifecycle—from architecture and API design through implementation, production deployment, monitoring, and continuous performance improvements.

Rajshree Yoga **Software Engineer** **Mar 2024-May 2025**

- Built and shipped cross-platform applications using Flutter, supporting Android, iOS, and Web from a shared codebase.
- Reduced Flutter Web bundle size by 66% (90 MB to 30 MB) through architecture and dependency optimization, significantly improving application startup performance.
- Scaled the admin dashboard to efficiently manage 2+ years of application data, replacing a previous limitation of only 12 months.

- Implemented WebAssembly (WASM) modules to improve performance for browser-based processing workloads.
- Improved application responsiveness through rendering, state management, and UI performance optimizations.
- Worked closely with product and backend teams to deliver production-ready features and maintain application quality.

BloomStar Technologies **Software Engineer Intern** **Jun 2023 – Aug 2023**

- Developed Flutter mobile application features using Dart, building responsive and reusable UI components.
- Built REST APIs with Node.js, Express.js, and MongoDB to support mobile application functionality.
- Applied Provider for state management and followed modern software design patterns to improve maintainability.
- Participated in debugging, testing, code reviews, and agile development, contributing to successful feature delivery and deployment.

Projects

SearchGPT - Ask Anything (Google Play Store)

- Developed a fully on-device AI search assistant app using **Flutter**, eliminating the need for backend infrastructure.Engineered an **answer** generation pipeline using **LLMs to deliver accurate** and user-friendly final responses.
- Designed a **privacy-first architecture** with local data handling and optimized **performance** for low-latency UX.
- **Continuously improved** the app based on early user feedback, focusing on response clarity, app size optimization, and **user experience**

Awwwards Website (GitHub)

- A visually stunning Awwwards-winning website built with **React.js, GSAP, and Tailwind CSS.**
- Featuring scroll-triggered animations, geometric transitions, and responsive design, this project delivers an engaging and modern user experience inspired by Zentry.

Honors and Awards

- Finalist in the **VJTI National Level Hackathon**, ranking among the **top 12** teams **out of 500**
- Winner in the **Debugging** Contest by **CSC**, 2023
- Top **3 performers in the DSA** Coding contest during the "**CODE DRAGON CONTEST**" by NMIT, 2021
- Secured **88 Global Rank** in CodeChef June Challenge 2021
